

Quick-Start Guide

With Adore Roll-on Strip Wax, you can remove hair from just 2 mm length on large body areas very quickly. For optimal results follow the correct steps of the PINK 2 mm Waxing Technique as described below. To see PINK in action visit: www.youtube.com/PINKCosmetics.

1 PLACE ROLL-ONS IN HEATER

- ❖ The Adore Roll-ons are heated in a cartridge heater to approx. 50 °C (level 6 using Triple Roll-on Heater Professional Edition).

2 CHECK CONSISTENCY

- ❖ At the correct temperature, the wax has a thick, syrupy consistency and can be applied smoothly.
- ❖ The wax should easily move back and forth in the cartridge.
- ❖ After applying a thin layer of wax, put the cartridge immediately back into the heater.

3 APPLY PRE-CARE

- ❖ To clean the skin, apply SkinClean Foam with your hands until the foam is absorbed into the skin.

4 APPLY THE WAX

- ❖ Roll the cartridge onto the non-woven strip for the wax to start coming out of the cartridge.
- ❖ Apply a thin layer of wax in the direction of hair growth. Important: Just one thin layer of Adore Roll-on Strip Wax is enough (looks almost transparent on the skin).
- ❖ After application, you have 30 to 40 seconds to remove the wax (after that, the Adore Strip Wax becomes firm and doesn't stick to the waxing strip very well).

5 REMOVE THE WAX

- ❖ Place the waxing strip on the layer of wax and let the strip stick to the wax by firmly rubbing the wax strip up and down with your hand.
- ❖ If the customer has cold skin, just rub the waxing strip a bit faster so the wax can stick to the strip.
- ❖ Quickly remove the waxing strip by pulling it against the direction of hair growth, along the skin.

6 APPLY AFTER-CARE

- ❖ Depending on skin type and situation, choose from one of the following products to remove wax residue and provide optimal care:
 - AfterCare Oil is especially helpful for very dry skin and during winter months.
 - AfterCare Cream is applied preferably during summer or to help prevent folliculitis.
- ❖ If the customer has a hot feeling on the skin and likes a cooling effect after waxing, the treatment is completed with the SkinCool Gel to reduce redness and give the skin fresh and relaxed feeling. Leave out the eye area.
