

Quick-Start Guide

With Next Generation Wax, you can remove hair as short as 1 mm on sensitive parts of the body such as face, underarms and intimate areas. All of the six scents of Next Generation Wax are used without strips and, besides being more pleasant to the skin, this innovative wax is well-known for not leaving any residue. For optimal results follow the correct steps of the PINK 1 mm Waxing Technique as described below. To see PINK wax in action visit: www.youtube.com/PINKCosmetics.

Sign up for a hands-on training at one of the PINK Waxing Academy Centers or learn from the comfort of your own home during an Online Waxing Training or with the PINK Waxing Manuals. Whatever option you choose, we are always by your side to support you every step of the way. To share tips and tricks with the PINK Waxing Experts join our English speaking Facebook Group: Depiladora's Secrets or the Dutch speaking Group: Depiladora's Secrets Nederland.

1 POUR PEARLS INTO HEATER

- ❖ Fill up the wax heater with wax pearls up to at least a 1/3 full and heat to just over 40 °C.
 - Depilatory Heater Professional Edition (800 ml / 450 ml): initially for 15 minutes at maximum, then at level 4 to a maximum 5.
 - Depilatory Heater Professional Edition (1000 ml): first 10 minutes at level 4, then at level 2 to a maximum of 2.5.

- ❖ At the right temperature, the wax has a honey-like consistency. This is easy to recognize as the wax stays on the spatula tip, does not drip from the spatula and does not draw threads.

2 APPLY PRE-CARE

- ❖ Clean the skin with the SkinClean Lotion and a cotton pad.
- ❖ Put one or two sprays of PreCare Oil on a cotton pad and apply to the skin.
- ❖ With Vinyl gloves on, massage the PreCare Oil into the skin, until the skin glistens slightly (if there is too much oil, dab skin with cosmetic tissue).

3 APPLY THE WAX

- ❖ Apply wax with the wooden spatula against the hair growth direction at a 90° angle using firm pressure. If hair is long, apply in the same direction the hair is growing.
- ❖ Create an egg-shaped, symmetrical wax patch.
- ❖ At the same time leave the edge thicker so that the slightly raised edge can help you grip and pull the wax off.
- ❖ You can make multiple patches at the same time.

4 REMOVE THE WAX

- ❖ Wait until the patches dry (about 10 seconds).
- ❖ The patches remain flexible on the skin for a very long time and do not break.
- ❖ Remove the patches along the skin and against the direction of hair growth (do not pull up).
- ❖ Immediately apply slight pressure with your hand.

5 APPLY AFTER-CARE

- ❖ Apply AfterCare Cream to disinfect and soothe the skin, boost hydration and help close the hair follicles.
- ❖ If the customer has a hot feeling on the skin and likes a cooling effect after waxing, the treatment is completed with the SkinCool Gel to reduce redness and give the skin fresh and relaxed feeling. Leave out the eye area.
